

Terraform remote state storage configuration

Topics covered:

- Why so s3 is good choice for remote state storage
- Architecture view - where S3 remote state storage fits in
- Create a s3 bucket
- Configure backend for remote state storage

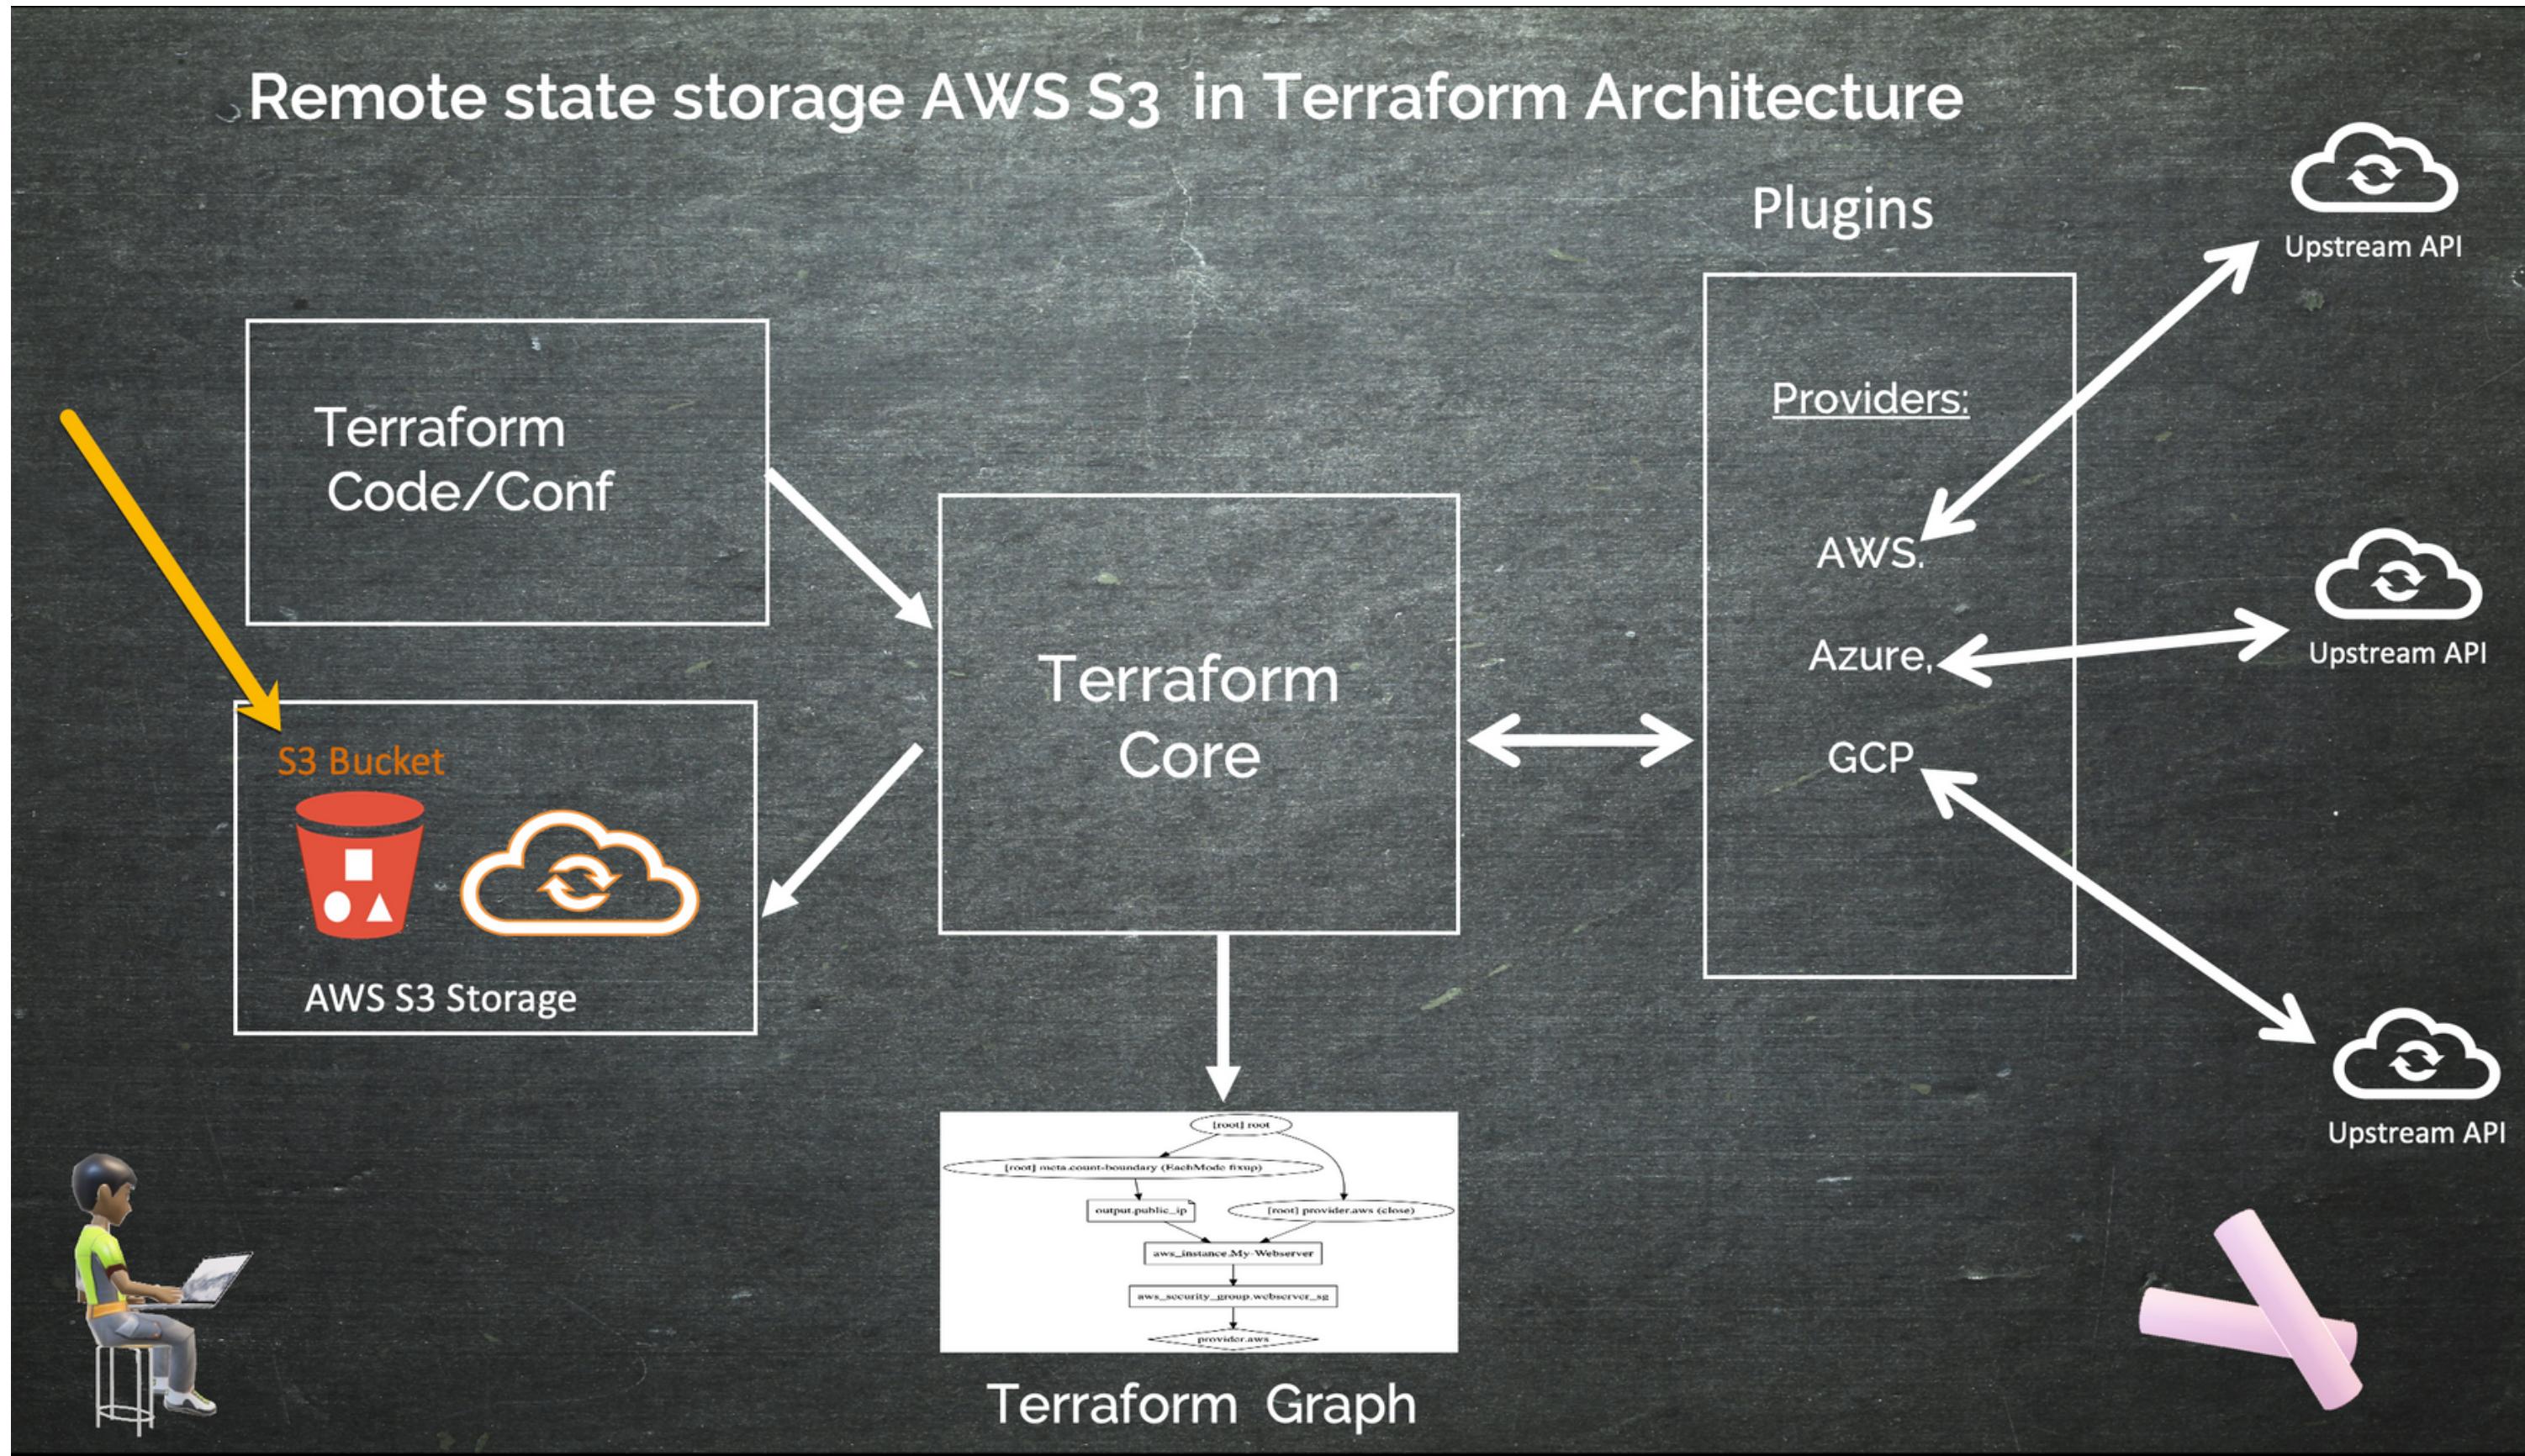

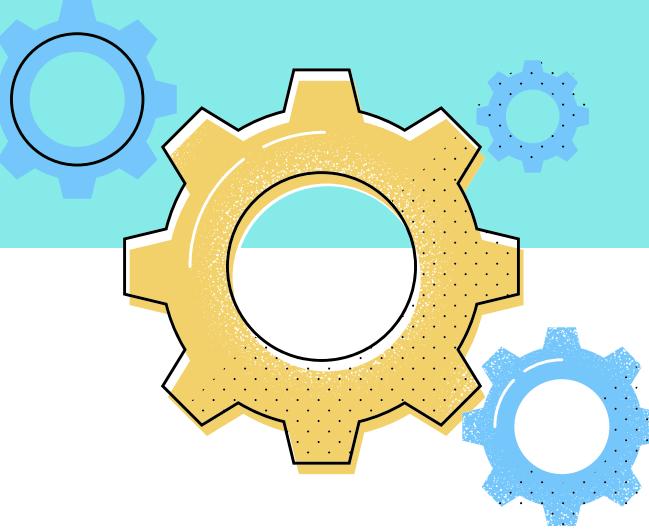

Terraform State: remote state storage , AWS S3

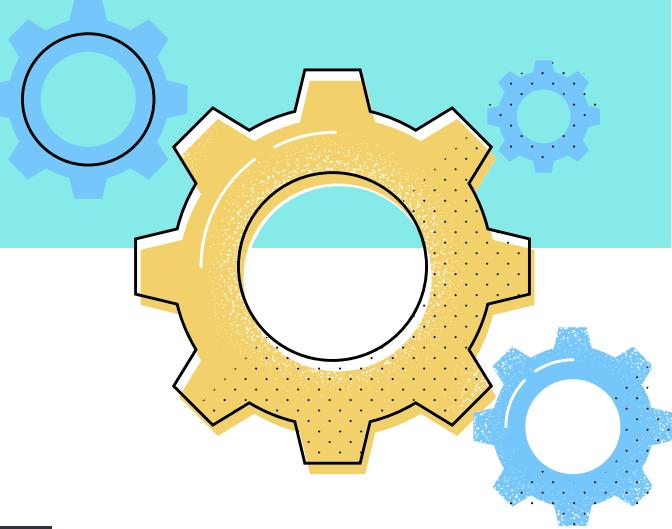

Access to state in remote
storage AWS s3

Terraform State: Architecture , where s3 fits in

Terraform State: Backend configuration

```
└─ terraform_state.tf > └─ s3 > └─ region
  1  terraform {
  2    backend "s3" {
  3      encrypt = true
  4      bucket  = "terraformiac-mystach-tfstate"
  5      key     = "<deploy-multiple-webserver/terraform.tfstate >"
  6      region  = "us-east-1"
  7    }
  8  }
```
